Functions

System Overview

Featuring a True Day/Night, 2-megapixel resolution LPR camera in low speed environment, such as parking, access control and urban street. It supports video detection and recognizes the plate in low speed less than 60KMH with embedded LPR algorithm. White list database inside the camera control the barrier opened. This model provides an all-in-one solution for capturing long distance license plate with long focus lens and strong white lighting in outdoor applications. True WDR for environment with direct sunlight or glare,even head light on when the vehicle approach.

Functions
Embedded license plate recognition algorithm

With built-in intelligent video analytics, the camera has the ability to detect and recognize moving vehicle's plate number in low speed less than 60kmh. No matter for the approaching or departure vehicle, access ANPR camera will take a snapshot for plate cutout, vehicle overview picture and also record the surveillance video.

Embedded White list

Embeded with white list inside the camera, control the barrier opened by the camera relayout if the plate number recognized is in the white list.Support to import batch list as much as 10000 records.

Wide Dynamic Range(WDR)

Embeded with industry leading wide dynamic range (WDR) technology, vivid plate picutures are achieved even in the most intense contrast lighting conditions. For applications with both bright and low lighting conditions that change quickly or the head light of vehicle is on at night, True WDR (140dB) optimizes both the bright and dark areas of a scene at the same time to provide usable video of plate.

Multiple Detection

The camera supports loop and video detection, it is more stable when the system is used for controlling the barrier or counting the vehicle number in the access control, also even the loop detection is accident, video detection will be instead automatically.
